## San Juan County

Released: February 2020

Prepared by: Joel Salas, Economist, and Ryan Eustice, Economist

Chart 1. Matched Taxable Gross Receipts Per Quarter

San Juan County's matched taxable gross receipts (MTGR) saw a decrease of approximately \$45M from Q1 to Q2 of FY20, as seen in Chart 1. Q2 did, however, see a 2% or \$16.5M year over year (YOY) increase from FY19 to FY20. Public Administration saw a substantial YOY increase of 141% for Q2, seen in Table 1 on page 2. This industry had a reported MTGR in Q1 FY20 of \$0 and the substantial increase in Q2 FY20 may be due to the timing of filing where Q1 is showing up in Q2.

Retail Trade and Construction remain the largest industries by MTGR.

Chart 2. FY20 - Q2 Industry Size by Matched Taxable Gross Receipts

Matched Taxable Gross Receipts (MTGR) is the best tax data available to show underlying economic activity. It matches a tax payment with reported receipts for each taxpayer, by industry.

Gross Receipts Tax (GRT) revenue collections saw a decrease of 7% from Q1 FY20 to Q2 FY20, decreasing from \$19.2M to \$18M respectively. This decrease comes after two consecutive quarters of growth. Q2 had a 6% or \$460K YOY increase. Table 2, on page 3, shows multiple industries having no contribution to GDP in 2018. This is due to the number of companies within the industries being so low that the Bureau of Economic Analysis has withheld the information for the industry to avoid disclosure of confidential information. Table 2 does not necessarily reflect the proportion each industry contributes to overall GDP.

HB6, passed in 2019, made widespread tax changes within New Mexico. One notable change is the conversion to destination-based sourcing that will begin after a two year delay. During this delay, local governments will receive a distribution that is a portion of \$2M each month. The portion distributed will be based on what the population of each county is to the total population of all counties, as per the most recent decennial census.

Chart 6. Quarterly Initial Unemployment Claims

Chart 7. Calendar Year % Change In Real GDP Year Over Year

A significant unexplained increase in **Initial Unemployment Claims** can be an early indicator of an incoming economic downturn. Explained increases commonly include seasonal job fluctuations, government shutdowns resulting in mass employee furloughs and the closing of a major regional facility. The major uptick in the initial unemployment claims is directly tied to the COVID-19 outbreak and the subsequent closure of “non-essential” businesses. These businesses tend to be a major component of the workforce. As the stay at home order stays in effect, it is likely that the initial unemployment claims will continue to increase as the economy shifts to handle the unprecedented changes.
